

Godwin Odenigbo | Software/Cloud Engineer

▪ [Email](#) ▪ [Github](#) ▪ [LinkedIn](#) ▪ [Portfolio](#) ▪ [Blog](#) ▪ Lagos, Nigeria (GMT+1)

Senior Software and Cloud Engineer with **6+ years of experience building scalable backend systems, cloud infrastructure, and blockchain-enabled platforms**. Proven track record leading high-impact projects at Sky UK, designing distributed systems serving millions of users, and building fintech products enabling crypto-to-fiat transactions across the world.

Key Achievements

- Led the complete redesign and cloud migration of **Crossdriver** at Sky UK, transforming it into a horizontally scalable AWS-based system serving over **2 million daily requests** with **99.999% uptime** across platforms like Peacock and NOW TV.
- **Architected and developed Crosstalk, a machine learning-powered audio-video synchronization system, improving playback quality for 30+ million global users and reducing manual QA effort by 70% across large-scale streaming events.**
- Designed and built the backend infrastructure for **Digitpay**, enabling secure **crypto-to-fiat transactions** and powering **cross-border payments across Africa**, scaling the platform to support multi-country operations with high availability and regulatory compliance.
- **Engineered core APIs and event-driven systems at Digitpay** that processed over **\$500,000+ in transaction volume**, while improving onboarding, transaction speed, and overall user experience for stablecoins to fiat transactions.
- Contributed to the development of **TixHive** at Blocverse, an NFT-based ticketing platform that generated over **₦150 million in revenue** and facilitated **50,000+ ticket sales** through blockchain-enabled transactions.
- Mentored and trained **1,000+ engineers** through Anambra Techies, driving grassroots tech growth and helping junior developers transition into professional engineering roles.

Technical Skills

- **Programming Languages:** Typescript (6 years), Javascript (6 years), Python (4 years), Scala (2 years), Solidity (2 years)
- **Development:** NodeJs, Hardhat, Truffle, EthersJs, Web3Js, ReactJs, VueJs, NestJs, NextJs, FastAPI
- **Monitoring:** CI/CD Codecov, Github actions, Honeycomb
- **Testing and Quality Assurance:** Jest, Mocha, Chai, Playwright, Test-Driven Development TDD
- **Cloud and DevOps:** AWS, Docker, CI/CD, Kubernetes, AWS lambdas, Gateway, and EC2 instances AWS (Lambda, Serverless Framework, SQS, Kinesis, EC2, API Gateway, EventBridge, SNS, DynamoDB, CDK, CloudFormation), Docker, Kubernetes, CI/CD (GitHub Actions, GitLab CI, Jenkins), Linux, Git, Github
- **Databases:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, NoSQL
- **Messaging & Streaming:** Kafka, RabbitMQ, BullMQ
- **System Design & Architecture:** Distributed Systems, Microservices, Event-driven Architecture, Object-Oriented Programming, Data Structures & Algorithms, Problem Solving
- **AI Coding Tools:** Github Copilot, Claude Code, Cursor, Codex, Anti Gravity

Experience

[Digitpay](#) | Founding Senior Software Engineer | October 2024 - Present

- Designed and built Digitpay's **frontend and backend infrastructure**, focusing on scalability and security, as well as crypto-to-fiat banking system integration which enabled onboarding thousands of users.
- Worked with the co-founders on the **pivot of DigitSave into Digitpay to solve critical market challenges** and improve the user flow for cryptocurrency spending.
- Developed **secure APIs for crypto-to-fiat transactions** with [Node.js](#), Typescript, AWS, and an event-driven architecture, **powering more than \$500,000 in on-chain and off-ramp transactions**.
- Conducted Agile planning for the MVP, cross-functional team collaboration in task assignment via Trello, and setting achievable milestones for progress which accelerated the MVP launch ahead of schedule.
- Collaborated with designers to optimize UI/UX, streamlining the onboarding and transaction flow, which reduced drop-off rates and improved user engagement

- Drafted the technical and architectural documents, ensuring scalability, sustainability, and team alignment with established design and SOLID principles.
- Contributed to Digitpay's acceptance into the Lisk/AyaHQ Incubator Program, **securing over \$30,000** in funding and recognition for innovation.
- Oversaw the architectural redesign of Digitpay's backend infrastructure, scaling the platform from supporting payments in Nigeria to enabling multi-country transactions across Africa, ensuring regulatory compliance, high availability, and seamless cross-border user experience.
- Leveraged AI-assisted development tools such as GitHub Copilot, Claude Code, Cursor and ChatGPT to accelerate development, streamline debugging, and improve code quality, enabling faster delivery of core features including Digitpay's **crypto-to-fiat and cross-border payment infrastructure across Africa**.

Sky Media UK | Software Engineer | September 2022 - October 2024

- **Led Crossdriver Cloud Migration:** Led the complete redesign and migration of Crossdriver, Sky's internal automation tool, to use a **horizontally scalable AWS infrastructure, which now serves 2 million daily requests and achieves 99.999% uptime on streaming platforms like Peacock and NowTV**.
 - Crossdriver's disparate deployments were consolidated into a single, robust, and cloud-native Crossdriver system using AWS Lambda, EC2, DynamoDB, and CloudFormation.
 - Onboarding new teams now takes **15 minutes** instead of weeks due to the implemented automated CI/CD onboarding processes.
 - Provided guidance in cloud infrastructure, containerization using Docker, and IaC to junior engineers.
 - Named by the project supervisor, Senior Engineering Management, for the project's exceptional scalability and cost optimization.
- **Architected Crosstalk (Machine Learning-Based Audio-Video Sync Tool):** Developed backend for Crosstalk, a critical tool that uses ML algorithms to ensure video-audio sync for Sky's video SDK, thereby ensuring broadcast quality for over **30 million live event viewers**.
 - Deployed ML inference pipelines using Typescript, Python, Node.js, AWS Lambda, and Kinesis.
 - Saved **70% of manual video/audio QA effort**, accelerating release cycles on Sky's digital platforms.
 - Provided flawless playback experiences for global events like Peacock's Wildcard matches that impacted millions of users globally around the world.

Blocverse | Backend Developer | August 2019 - August 2021

- Directed design and development of the backend for TixHive, a pioneering NFT-ticketing platform, where event promoters can tokenize and resell tickets as NFTs on the blockchain.
- Developed scalable Restful APIs and resilient web3 service for seamless interaction with the blockchain, processing over millions of ticket sales.
- Encoded and deployed smart contracts in Solidity for NFT minting, streamlining the ticketing process and facilitating secure transactions on OpenSea.
- Engineered and managed TixHive's frontend and backend infrastructure to deliver high scalability and zero downtime, supporting a 50%+ growth in platform adoption and transaction volume.
- Mentored and guided intern developers, developing talent within the team and assisting one intern in growing into a full-time software engineer role.

Education

Professional Qualifications and Certifications

- AWS Certified Solutions Architect Associate
- AWS Certified Cloud Practitioner

Academic Education

- Bachelor of Science Information Technology. Middlesex University London, England (2021 - 2022) - Grade: First Class.
- Advanced Diploma in Software Engineering. Aptech Computer Education Enugu, Nigeria (2017 - 2019) - Grade: Distinction
